BRAIN, MIND, AND BEHAVIOR: AN INTRODUCTION TO NEUROSCIENCE

MCB C61 / PSYCH C61

Department of Molecular and Cell Biology,
and Department of Psychology

University of California, Berkeley - Winter-Spring Semester 2017

The human brain is the most complex structure in the known universe. The study of its structure and function and how it figures into our actions and experience is among the most exciting arenas of modern science. This class begins with molecules and cells, builds up to brains and nervous systems, encompasses neural signaling, sensory perception, memory, language, and emotion, and culminates with the great mystery of how brain processes relate to consciousness and mental experience - that is, how mind is related to brain. This is a comprehensive introduction to the exciting subject of contemporary neuroscience, open to all interested students.

Two Required Lectures and one Required Discussion Section meeting each week.

Lecture times: Tuesday and Thursday at 3:30 to 5:00 p.m. - Hertz Hall

Instructor: David Presti 249 Life Sciences Addition (LSA)
phone and voicemail: 643-2111 <presti@berkeley.edu>

Office hours: Wed 11:00 to 11:45 a.m., Thu 11:00 to 11:45 a.m. in 249 LSA

Other course readings: There will be additional readings posted regularly throughout the semester on our class bCourses website.

Graduate student instructors (GSIs) and their email addresses:

Arjun Mukerji <arjunn@berkeley.edu>
Cameron Smith <cmbsmith@berkeley.edu>
Chris Warner <cwarner@berkeley.edu>
Consuelo Soliz <csoliz@berkeley.edu>
Emilio E Soto Soto <emilioemilio@berkeley.edu>
Jocelyn Breton <jbreton@berkeley.edu>
John Blair <jblair@berkeley.edu>
Vinitha Rangarajan <vinitha@berkeley.edu>

The GSIs are here to help you get the most from this class. You are encouraged to get to know and talk with your GSI. Your GSI will see you in weekly Discussion Section and will also be available to meet with you during weekly office hours. Don’t be shy!

</tbody>
</table>

Prerequisites: A passion to learn! There are no University course prerequisites for this class. Both non-science and science majors are encouraged to enroll.

Please read this syllabus carefully. We have tried to make it comprehensive and address most questions that arise.

Attendance in lectures and discussion section is strongly encouraged. For your discussion section, attendance and participation directly counts toward your grade. While the factual content in the course can be learned by reading and obtaining notes from the lectures, we believe there are important elements of the material that are best, if not exclusively, transmitted through in-person contact. There is more to learning than memorizing facts, even if learning facts is also important.

Use of Electronics in Class: The use of laptop computers, tablets, or other screen devices in class is not allowed. Cell phones must be turned off at the start of class. No texting during class.

Grading: Your overall grade is based on exam performance (80-85% of your grade), discussion section homework assignments and debates (10-15% of your grade), and discussion section attendance and participation (5%). There are two midterms and a final. The final exam will be longer and cover the entire semester, and will be worth more than a midterm exam (although less than both midterm exams together). The discussion-section portion of your grade comes from written homework assignments, participation in oral-group debates, and overall attendance and general participation. For one of the debates you will be graded on your participation as part of a debate team; for the other two debates you will be graded on participation in the class discussion. The exact % contributions of the various exams, quizzes, and assignments will be determined at the end of the semester. We do not indicate the exact % contributions
of the grade components at the beginning of the semester because we wish to discourage the running
computation of points and accompanying preoccupation with how well one is doing in the class. We do not
wish to hear questions of the form: “How well do I need to do on the final exam in order to get an ‘A’ in the
class?” Our answer to such questions will always be: Do as well as you can on all exams and assignments!
The goal is to enjoy learning the material; the assignments and exams hopefully assist with this.

Although the homework and debate assignments are worth only 10-15% of your grade, it will not be
possible to receive higher than a "C-" grade in the class without turning in all of the written
homework assignments and participating on an oral-debate team. If you are taking the course P/NP,
you must turn in all of the homework and participate in the debate in order to pass the class. The
homework and debate assignments are required in this way because we believe them to be an
important component of the learning in this class.

Your letter grade in the course will be determined according to absolute standards of performance. This
hopefully relates to your acquisition of knowledge and understanding of the material. Importantly, you will
not be competing against fellow students in the sense that we do not force letter grades to conform to a
pre-determined distribution; this is another way of saying that we do not “grade on a curve.” If everyone
does extremely well, everyone could receive an “A” grade. If everyone does poorly (highly unlikely), then
everyone could get a low grade. Rather than devoting energy to worrying about where grade cut-offs are,
if you are truly interested in this subject and in getting the most from this class, we urge you to study
seriously from the beginning, do the readings, and truly make an effort to learn the material. You will be
rewarded with deep knowledge and understanding of some really fascinating topics. Good grades will be a
natural side effect.

In past years the percentage of students earning an “A” or a “B” in this class has generally been between
60 and 70%. Thus, the majority of students do well in this class. However, in order to do well in the class
you do have to learn a bunch of stuff. It is also easy to get a “C” or even lower grade in the class if you
don’t put in sufficient effort.

Do not make the mistake of not keeping up with the material and then trying to negotiate a last-minute
deal to improve your grade. On the bCourses website (in Files: Readings Required) there are some
examples (“Emails to Avoid”) of desperate emails I have received in past years. It is very sad. We
recommend that you not get yourself into the position of needing to write such emails. We do not offer
extra credit or make other arrangements to boost grades. If you want a good grade, you must learn the
course material in a timely manner. It’s as simple as that. Hopefully it will be enjoyable.

Exams will consist of multiple-choice and short-answer questions. Each midterm exam covers the
preceding portion of the course and draws from material in lectures, discussion sections, and required
readings. The final exam is comprehensive and covers material from the entire semester. Study guides
will be provided and review sessions will be conducted prior to each of the exams. A sampling of questions
from past exams is on bCourses (in Files: General Background). There will be no surprises or trick
questions. Our desire is for you to learn the material and do well on the exams.

You are responsible for knowing material presented in lectures, all material from the textbook
(whether or not it is covered in lecture), and other required material posted on bCourses. Key
Concepts study guides will be posted on bCourses to assist in identifying material from the lectures and
textbook that we feel is most important to know.

• Midterm Exam I is Tuesday February 21 at 3:30 p.m. in Hertz Hall
  • covers material from the Lectures of Jan 17 through Feb 16 and corresponding material from the
textbook (approximately chapters 1-8) and any supplementary readings
Midterm Exam II is Thursday April 6 at 3:30 p.m. in Hertz Hall
  - covers material from the Lectures of Feb 23 through April 4 and corresponding material from the
textbook (approximately chapters 9-17) and any supplementary readings

Final Exam is Friday May 12 at 7:00 p.m. (location to be announced)
  - comprehensive and covers material from the entire semester, including all Lectures, all 22 chapters
of the textbook, and all supplementary readings

- exams dates will not be changed; mark your calendars now
- there will be no make-up exams
- if you miss an exam, you will receive zero points for that exam
- if you miss a midterm exam with a credible excuse (e.g., significant medical problem documented with
verifiable documentation), your final exam score will count proportionally more in determining your
course grade. Written documentation must be presented in-person to me and to your GSI.
- if you miss the final exam with a credible excuse, you will receive an incomplete (I) grade for the course
(provided you have passing status in the class prior to the exam, otherwise grade = F); it may be
necessary to wait until the next time the class is given to resolve the incomplete grade

Homework:
- homework assignment 1 - analysis of an article you find from the recent news media
  - due in discussion section the week of January 30 to February 3
- homework assignment 2 - writing about consciousness and experience in non-humans
  - due in discussion section the week of February 6-10
- homework assignment 3 - writing questions appropriate for an exam in MCB/PSYCH 61
  - due in discussion section the week of March 13-17
- homework assignment 4 - haiku poetry composition about brain, mind, and behavior
  - due in discussion section the week of April 24-28
- detailed instructions for the homework will be provided in class and on bCourses in Files: Homework
- homework assignments are to be turned in to your GSI as paper copy, not e-mailed
- Assignments turned in up to one week after the due date will receive half-credit. Assignments turned in
1-2 weeks after the due date will receive zero points but will be credited as being turned in.
Assignments received more than 2 weeks late may not be accepted. Note that this becomes a serious
matter, since you need to receive credit for all of the homework assignments in order to receive
better than a C- grade (for a letter grade) or a passing grade (for a P/NP grade) in the class. Thus,
be sure to complete your homework on time. This is not an arbitrary rule, but is done to encourage
completion of the homework in the way that we believe to be most useful.
- Homework assignments are meant to be interesting, informative, and enjoyable!

Debates:
- there will be three debates conducted in discussion section, with one-third of the class involved in each
of the debates
- the first debate will be during the week Feb 27-March 3, the second will be during the week
March 20-24, and the third will be during the week of April 17-21
- debate guidelines and topics (when announced) are posted on bCourses in Files: Debates.
- for one of the debates you will be graded on your participation as part of a debate team; for the other
two debates you will be graded on participation in the class discussion
- we do our best to choose topics that will make for very interesting debates, where strong arguments can
be made for both sides of the issue
- if you have an idea that could be interesting as a debate topic, please let us know
Honor Code: The student community at UC Berkeley has adopted the following Honor Code: "As a member of the UC Berkeley community, I act with honesty, integrity, and respect for others." The hope and expectation is that you will adhere to this code.

Collaboration and Independence: Reviewing lecture and reading materials and studying for exams can be enjoyable and enriching things to do with fellow students. This is recommended. However, unless otherwise instructed, homework assignments are to be completed independently and materials submitted as homework should be the result of one's own independent work.

Cheating: Anyone caught cheating on a quiz or exam in this course will receive a failing grade in the course and will also be reported to the University Center for Student Conduct. A good lifetime strategy is always to act in such a way that no one would ever imagine that you would even consider cheating. For example, in order to guarantee that you are not suspected of cheating, please keep your eyes on your own materials and do not converse with others during quizzes and exams.

Plagiarism: Your homework essays must be original writing composed by you. To copy text or ideas from another source without appropriate reference is plagiarism and will result in a failing grade for your assignment and usually further disciplinary action. Additional information on plagiarism and how to avoid it: http://gsi.berkeley.edu/gsi-guide-contents/academic-misconduct-intro/plagiarism/

Academic Integrity and Ethics: Cheating on exams and plagiarism are two common examples of dishonest, unethical behavior. Honesty and integrity are of great importance in all facets of life. They help to build a sense of self-confidence, and are key to building trust within relationships, whether personal or professional. There is no tolerance for dishonesty in the academic world, for it undermines what we are dedicated to doing - furthering knowledge for the benefit of humanity.

Your experience as a student at UC Berkeley is hopefully fueled by passion for learning and replete with fulfilling activities. And we also appreciate that being a student can be stressful. There may be times when there is temptation to engage in some kind of cheating in order to improve a grade or otherwise advance your career. This could be as blatant as having someone else sit for you in an exam, or submitting a written assignment that has been copied from another source. And it could be as subtle as glancing at a fellow student's exam when you are unsure of an answer to a question and are looking for some confirmation. One might do any of these things and potentially not get caught. However, if you cheat, no matter how much you may have learned in this class, you have failed to learn the most important lesson of all.

Safe, Supportive, and Inclusive Environment: Whenever a faculty member, staff member, postdoc, or GSI is responsible for the supervision of a student, a personal relationship between them of a romantic or sexual nature, even if consensual, is against university policy. Any such relationship jeopardizes the integrity of the educational process.

Although faculty and staff can act as excellent resources for students, you should be aware that they are required to report any violations of this campus policy. If you wish to have a confidential discussion on matters related to this policy, you may contact the Confidential Care Advocates on campus for support related to counseling or sensitive issues. Appointments can be made by calling: 510-642-1988. The classroom, lab, and work place should be safe and inclusive environments for everyone. The Office for the Prevention of Harassment and Discrimination (OPHD) is responsible for ensuring the University provides an environment for faculty, staff and students that is free from discrimination and harassment on the basis of categories including race, color, national origin, age, sex, gender, gender identity, and sexual orientation. Questions or concerns? Call 510-643-7985, email ask_ophd@berkeley.edu, or go to http://survivorsupport.berkeley.edu/
Communication and E-mails: We like teaching this class! The material is fascinating and, we believe, useful and important stuff to know. I enjoy being available during office hours and after lectures to answer questions and further discuss the material. I strongly prefer in-person contact to email. Questions of importance or ones that require detailed answers must be addressed in person. In most circumstances, I am unlikely to respond to e-mail questions. Always make sure to see me in person about any important matter. It will never be an acceptable excuse to say something like: “Well, I sent you an email and never heard back.” As stated: Always make sure to see me in person about any important matter. E-mail is a wonderful tool and very convenient. However, it is not a substitute for direct personal contact, especially when such contact is easy, as it is with me.

Thanks again for your interest in this subject. The GSIs and I are excited about being together with you this semester, for what we hope to be an enjoyable and fulfilling adventure in learning!

• University holidays: no discussion sections or lectures on these days
  • Monday, February 20 - honor U.S. presidents, may they continue to be up to the tasks at hand
  • March 27-31: Spring Break - enjoy a well-deserved rest

• Important astronomical dates and days of ancient ritual
  New Moons: January 27, February 26, March 27, April 26, May 25, June 23
  Full Moons: January 12, February 10, March 12, April 10, May 10, June 9
  Vernal Equinox: March 20
  Penumbral Lunar Eclipse: February 10 (visible in Berkeley, at moonrise)
  Beltane: May 1
  Summer Solstice: June 20
  Total Solar Eclipse: August 21 (visible across the entire United States: NW to SE)

• lunar and solar information
