

### MCB C100A Tutoring Program

The MCB C100A tutoring program provides students in the course with a space to ask questions about problem sets, lecture material, and study strategies. The tutoring sessions are offered twice per week and are led by undergraduates who performed strongly in the course. Each session is geared toward teaching students how to approach and work through the problem sets.

As a student in MCB C100A, I attended most of the tutoring sessions because I found them to be a valuable resource. The tutors were able to answer nearly all of the questions I had, and they taught me useful problem solving techniques. Without their consistent help, I would not have performed as well in the course.

Now in my third semester as a tutor for MCB C100A, I am grateful for the opportunity to be a part of this program. Through tutoring, I have deepened my understanding of the course content and improved my leadership skills. Overall, the chance to help students succeed in the course has been a rewarding experience.

~Harvey Chahal, MCB C100A Tutor  
Class of 2011, Major in Biological Chemistry
